ANNOUNCEMENT	595
--------------------	-----

AUTHOR INDEX	596
--------------------	-----

The Subject Index for this volume (Volume 67) will appear in the December issue as part of cumulative index for the year 1975

Second Edition The Biology of Animal Viruses

by F. FENNER, B. R. McAUSLAN, C. A. MIMS, J. SAMBROOK, and D. O. WHITE

Completely revised and reorganized, this new edition of the highly successful THE BIOLOGY OF ANIMAL VIRUSES will continue to be a standard reference source in this area of virology. It contains many new chapters, figures, and plates, and it includes a bibliography of over 3500 carefully selected references. Yet this detailed, integrated presentation of the biology of the viruses of vertebrate animals is now combined into one convenient volume. Describing model systems instead of merely cataloging viruses, THE BIOLOGY OF ANIMAL VIRUSES, 2nd Edition, features discussions of: The classification of animal viruses; Physical and chemical properties of viral particles; Molecular biology of viral multiplication; Viral genetics; The pathogenesis of viral infections and the role of the immune response and other factors in pathogenesis; Persistent viral infections and viral oncogenesis; and The treatment of viral infections.

CONTENTS: The Nature and Classification of Animal Viruses; Cultivation, Assay, and Analysis of Viruses; The Structure and Chemistry of the Virion: A Systematic Survey; Structure and Function of the Animal Cell; The Multiplication of DNA Viruses; The Multiplication of RNA Viruses; Viral Genetics; Interference and Interferon; Pathogenesis: The Spread of Viruses through the Body; Pathogenesis: The Immune Response; Pathogenesis: Nonimmunological Factors and Genetic Resistance; Persistent Infections; Viral Oncogenesis: DNA Viruses; Viral Oncogenesis: RNA Viruses; Prevention and Treatment of Viral Diseases; The Epidemiology of Viral Infections; and Evolutionary Aspects of Viral Diseases.

A Volume in the PERSPECTIVES IN IMMUNOLOGY Series

IMMUNOBIOLOGY OF THE TUMOR-HOST RELATIONSHIP

Edited by
RICHARD T. SMITH
MAURICE LANDY

Proceedings of an International Conference Held at the Sormani
Palace, Milan, Italy, January 14-18, 1974

1974, 376 pp., \$23.50/£11.30

There is a growing conviction in the minds of physicians that a central issue in cancer is essentially immunologic. This consensus arises both from intuitive medical thought and from substantial experimental and clinical data showing that cancer is a consequence of host immunologic derangement. Moreover, manipulations involving immunologic components of the tumor-host relationship can be shown to affect the balance in favor of or against the host.

This volume, is the sixth in the PERSPECTIVES IN IMMUNOLOGY series, represents a rigorously edited version of an entire week of intensive and wide-ranging discussion. It offers to the clinician and experimentalist, as well as to the immunologist and tumor biologist, a critical assessment of the data base on the immunobiology of the tumor-host relation—fully revealed in an awesome complexity. It also presents recent findings that led to the abandonment of some long held but now untenable views, and to the formulation of some new, meaningful principles. These will be useful to guide present and future efforts in dissecting out the biological elements that determine the dominance of tumor over host, and especially to the development of applications to human cancer.

Virus Structure

By R. W. HORNE

*Department of Ultrastructural Studies
John Innes Institute, Norwich, England*

A Volume in the
ULTRASTRUCTURE OF CELLS AND ORGANISMS Series

CONTENTS:

INTRODUCTION

Units of Measurement. Terminology.

SYMMETRY IN VIRIONS

Helical Symmetry. Icosahedral Symmetry. Structure
Units and Capsid Triangulation Number. Virus Nucleic
Acid and Core Structure.

SMALL DNA ICOSAEDRAL VIRUSES

The Structure of ϕ X174 Virus. Small RNA Icosahedral
Viruses (Nepoviruses and Picornaviruses). Poliovirus
(Picornavirus).

DOUBLE-STRANDED DNA ICOSAEDRAL VIRUSES

Papovaviruses. Adenoviruses. Herpesvirus. Tipula Irides-
cent Virus.

VIRUSES WITH HELICAL SYMMETRY

Myxoviruses

VIRUSES WITH COMPLEX OR A COMBINATION OF SYMMETRIES

The Bullet-Shaped Viruses. The Tailed Bacteriophages.
The Poxviruses.

SUMMARY.

REFERENCES.
